

Host PowerTools

Host PowerTools simplifies the management of servers and storage, enabling different IT teams to easily work together and provide greater data access and availability.

Host PowerTools

Ensure Configuration Readiness and Self-healing

Host Power Tools (HPT) verify that servers and storage are configured correctly and provide insight to automatically fix any configuration issues before they cause performance or availability problems.

Manage More Easily

Provides a consistent user experience with GUI and CLI across all supported platforms including Linux, Unix, Windows, and VMware including NVMe/TCP for VMware.

Break Down Barriers Between IT Teams

Enable better visibility and understanding of storage objects between the server and application teams.

Enable Self-service of Routine Storage Operations

Empowers storage administrators to enable self service of storage provisioning, snapshot and restores to the server or application teams.

Secure Provisioning

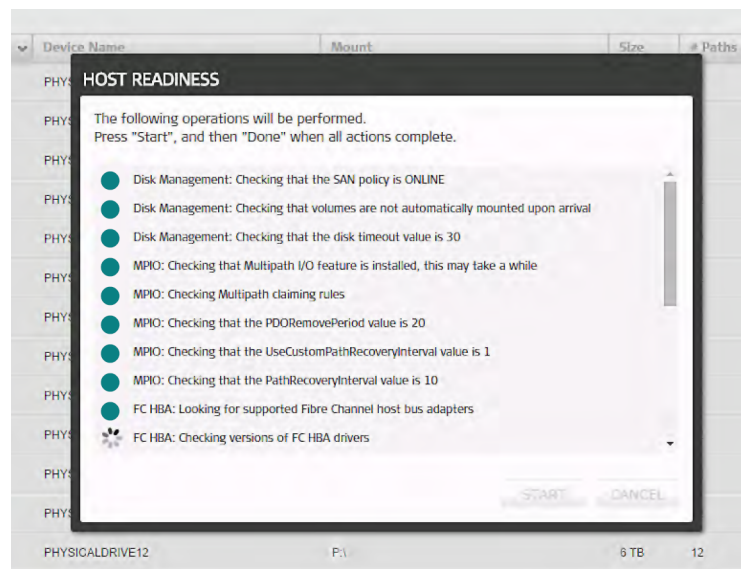

Securely provisions and manages storage resources from the application servers for all major OS, virtualization, and application platforms.

Streamline VMware Operations

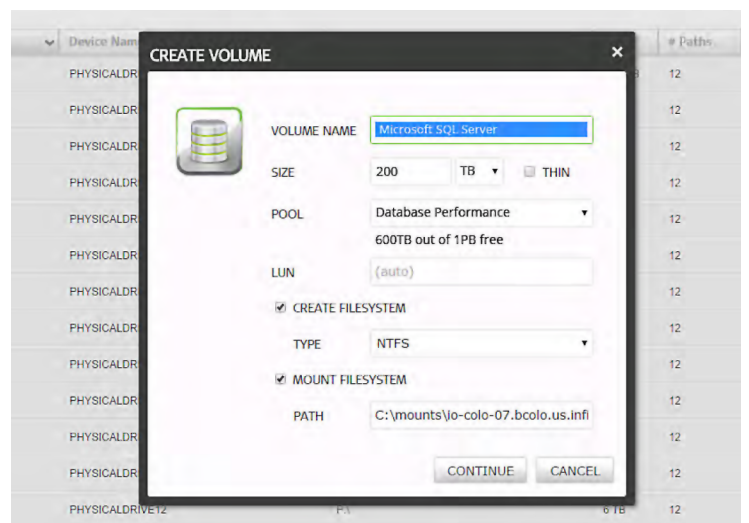

Enables consistent snapshots and self-service restore capabilities plus thin capacity reclaim.

Maximize Value

Host PowerTools incurs no extra charge as it is included with your Infinidat platforms.
